

13.3 Notes - The Natural Base e

1) Consider the parent function $f(x) = e^x$

Reference Point is still $(0, 1)$

Another point is $(1, e)$

Domain: $x \in \mathbb{R}$

Range: $y > 0$

H.A. @ $y = 0$

Transformations $y = a \cdot e^{x-h} + k$

2) $H(x) = 2e^{x+4} - 4$

a) Transformations: Left 4, Down 4, stretch by 2, vert.

b) $(0, 1) \rightarrow (-4, -2)$
 $(x-4, 2y-4)$

c) H.A. $\rightarrow y = -4$

d)

e) Domain $x \in \mathbb{R}$
 $-\infty < x < \infty$

Range $y > -4$

3) From 2005-2019, the sales of cell phones in millions of dollars is modeled by the function $S(t) = 116e^{0.18t}$ when $t=0$, year ²⁰⁰⁵

a) Initial sales amount (2005): 116 million

b) Annual growth rate: $r = 0.18 = 18\%$

c) Effective growth rate: $e^{0.18} \approx 1.197$

$$\frac{-1}{0.197} = \textcircled{19.7\%}$$

d) Sales amount in year 2020, $t=15$

$$S(15) = 116e^{0.18(15)}$$

≈ 1726 millions

1,726,000,000

e) what year is the value 3,000 million (3 billion)

$$3000 = 116e^{0.18x}$$

$$x \approx 18.1$$

$$\text{Year} = \textcircled{2023}$$

4) Given the graph, the equation is of the form $y = ae^{x-h} + k$

a) Domain

$$-\infty < x < \infty$$

b) Range

$$y < -6$$

c) Vertical scale factor

$$y = ae^{x+4} - 6$$

$$-8 = ae^{-4+4} - 6$$

$$-8 = a(1) - 6$$

$$a = -2$$

d) Write the equation

$$y = -2e^{x+4} - 6$$
